

Appl. No. 10/803,783
Amendment Dated July 26, 2004
Reply to Office Action of July 1, 2004

Amendments to the Specification:

Please replace the Abstract beginning at page 28, line 5, with the following amended paragraph:

A CMOS integrated circuit ~~that comprises~~ which has a graphics controller system that consists of a graphics engine and video memory together with some interface blocks, a PCMCIA host adapter, an infrared interface for generating video images on a LCD or CRT display unit, and a video stream interface for receiving video signals. Since the video memory is integrated on the same integrated circuit as the graphics controller, no package pins are required for the memory interface. The pins thus saved are used to provide access to an on-chip PCMCIA host adapter. The internal memory interface is 128 bits wide. Simultaneous performance improvement and power dissipation reduction is achieved because of the wide memory interface and the elimination of the large parasitic capacitances associated with a package pin connection.
